Table of Contents

Preface

The following conventions are used in this document:

Bold	Used for information that is typed, pressed, or selected in executables and instructions. For example, select **connect to host**.
Italics	Used for file names, directories, scripts, commands, user IDs, document names, and Bibliography references; and any unusual computerese the first time it is used in text.
<u>Underline</u>	Used for emphasis.
Arrows <>	Used to identify keys on the keyboard. For example <Return>.
"Quotation Marks"	Used to identify informal, computer-generated queries and reports, or coined names; and to clarify a term when it appears for the first time. For example "Data-Generation Report."
Courier Font	Used to denote anything as it appears on the screen or command lines. For example `tar xvf dev/rmt/3mm`
Capitalization	Used to identify keys, screen icons, screen buttons, field, and menu names.

1. Netscape Web Browser (WEBBr)

Netscape uses a shell wrapper to establish an environment upon invocation. Clicking on the icon executes the *WEBBr/bin/WEBBr_netscape.init* script. This script sets environment variables and then calls *WEBBr/BIN/netscape* (the netscape binary is placed in a separate directory to avoid having to rename it). First-time users will have a *~/.netscape* directory created for them and a netscape preferences file is placed in that directory. The skeleton for the preferences file is located in the *WEBBr/lib* directory. As system administrator, you may wish to edit that skeleton file.

NOTE: Java is enabled with this release of the segment. A class library named *java_30* has been added to the */lib* sub-directory of this segment.

To cause WEBBr to be used as the e-mail client, the installation modifies */etc/dt/appconfig/types/C/dtwm.fp*. If the user has a front panel configuration file in their home directory (*~/.dt/types/dtwm.fp* or *~/.dt/types/dtwm_root.fp*) or if the system is configured to look somewhere other than */etc/dt* for the front panel configuration, then clicking on the envelope icon on the front panel <u>will not</u> invoke WEBBr.

1.1 E-Mail

To ensure that incoming mail can be properly accessed by Netscape users who have selected the Built-in Movemail option, the following must be done:

C   Make sure that permissions for the mail spool directory (i.e., */var/mail* for Sun platforms and */usr/mail* for HP platforms) of your installation machine have been set properly (permissions should be set to *rwxrwxrwt* or *01777*).

C   Make sure that the $MAIL environment variable for each user is set to the mail directory for that user (e.g., the $MAIL environment variable for user *sysadmin* should be set to */var/mail/sysadmin* on a Sun machine).

This page intentionally left blank.
